

Proceedings of Czech and Slovak Technical Universities
and URSI Committees - ISSN 1210-2512

Welcome to the Radioengineering community

For the last 19 years, the Radioengineering journal quarterly has been publishing original scientific and engineering papers from the area of radio engineering and science.

The nature of the Radioengineering journal is **interdisciplinary**. This journal is interested in covering a wide area of radio electronics starting from wave propagation and antennas, continuing to high-frequency circuits and optoelectronics, and finishing with signal processing and multimedia. The journal can, therefore, present a wide view on all aspects of today's radio engineering and science, initiate a mutual inspiration between disciplines; and support their connection in the frame of complex radio electronic systems.

The Radioengineering journal makes an effort to **encourage** a younger generation of scientists and engineers. The journal offers them their first publication opportunity and gives them their first experience in writing a scientific paper. Independent reviewers carefully review each submitted paper, and attempt to explain its stronger and weaker aspects to the authors in detail.

Each December and June, the Radioengineering journal prepares a **special issue** focused on a selected topic of importance and current interest. In the past, special issues published in December were devoted to mobile communications, multimedia, advances in antennas and microwaves, electromagnetic compatibility, electronics circuits etc. The special issue published in June contains papers focused on a very narrow area of the radio engineering field. In 2009, the June special issues were focused on on Free-space Optical Communications (FSO). More information is available at web page:

Radioengineering Journal Benefits:

The Radioengineering journal is published both in the **printed** form and in the **electronic** one. All the papers in the full-text version are available free of charge at web pages.

The Radioengineering journal is the member of the Sister Societies' Publications of the IEEE Communications Society, covered by the Directory of Open Access Journals, covered in Thomson Reuters products and custom information services, indexed and abstracted in Science Citation Index Expanded and Journal Citation Reports, listed in INSPEC, indexed and abstracted in SCOPUS, part of EBSCO information products and licensed under Creative Commons Attribution 3.0 Unported License.
